## **EXAMINER'S AMENDMENT**

### *Information Disclosure Statement*

A line was placed through the reference for Braman, In Vitro Mutagenesis Protocols, Second Edition because the citation lists an entire book, but only the table of contents was provided.

The following is an examiner's statement of reasons for allowance: The invention of claims 1-52 are free of the art because the prior art does not teach a method of site-directed mutagenesis in which a terminal primer set and mutagenic primers are used together to produce multiple mutated sites simultaneously using primer extension and ligation. Hansen et al (US 6,676,924) teaches a method of site-directed mutagenesis in which the mutant strand is produced by using mutagenic oligonucleotides, a polymerase and a ligase and then multiple copies of the strand complementary to the mutant strand are amplified by PCR (column 6, lines 57-67 bridging column 7, lines 1-10). However, the use of terminal primers in combination with mutagenic primers in the production of the mutant strand are not taught or fairly suggested by Hansen et al.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
